

# INTRODUCING

**A NEW WAY TO FIGHT GERMS...**  
**...AND KEEP KID'S TOOTHBRUSHES GERM FREE!**

## OraLine®

Moms let's face it... even in the cleanest homes, the bathroom is full of germs that cause colds – and worse! You can't see them, but they are there... waiting for the chance to strike.

One of the toughest health challenges you face (other than keeping those busy little hands washed), is preventing cross contamination of your child's toothbrush. At home or especially at day care or camp, those toothbrushes are *THE* hotspot for germs.

GREAT NEWS!... OraLine® has created an innovative system that not only eliminates cross contamination, but actually motivates your child to brush more often.

OraLine's "Names & Faces" toothbrushes are custom printed with your child's name and photo, or animal characters are also available.

Your child will love to show off – and use, their own special toothbrush.

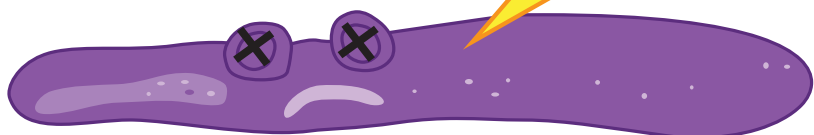

Combined with the OraLine® 60092 Toothbrush Sanitizer, cross contaminated toothbrushes are a thing of the past.

Only OraLine's sanitizer uses UV light AND a drying fan to eliminate 99% of all germs. The sanitizer also easily comes apart for simple no-hassle cleaning.

All this puts OraLine's system above any other. AND when you order your child's personalized toothbrushes you get a year's supply of 6 brushes! Includes Bubble Gum flavored ADA accepted fluoride toothgel that contains no sugar.

Don't let the "Germinator" put your child's health at risk ever again.
